DATE MAILED: 10/19/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/682,526	Applicant(s) RUBIN, AVIEL D.	
	Examiner Arezoo Sherkat	Art Unit 2131	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 August 2005.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-16 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Response to Amendment

This office action is responsive to Applicant's amendment filed on August 4, 2005. Claims 1-16 are pending.

Response to Arguments

Applicant's arguments filed August 4, 2005 have been fully considered but they are not persuasive.

Applicant argues that the combination of Bailey and Cane fails to disclose "generating an authentication code for a bundle that is ultimately added to and encrypted with the bundle".

Examiner responds that Cane discloses the use of checksums such as CRC, MD4, and MD5 as the authentication code for verification of data/file integrity. Such authentication codes are part of the packet/bundle to be transmitted via Internet, dialup connection, and generally across the network in an encrypted form by any of the various known methods such as RSA and DES (Col. 4, lines 1-27).

Examiner respectfully maintains the rejection formulated on Apr. 26, 2005 as follows:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2131

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bailey, III, (U.S. Patent No. 5,659,614 and Bailey hereinafter), in view of Cane et al., (U.S. Patent No. 5,940,507 and Cane hereinafter).

Regarding claims 1 and 9, Bailey discloses a method of backing up one or more files on a local device onto remote servers over a network comprising:

deriving a first cryptographic key and a second cryptographic key from a user-provided passphrase (Col. 17-18, lines 1-67 and Col. 19, lines 1-5);

compressing one or more files and adding each of the files to a bundle, and encrypting the bundle using the second cryptographic key prior to sending the bundle to the remote server (Col. 17, lines 50-67 and Col. 18, lines 1-53).

Bailey does not expressly disclose generating an authentication code for the bundle using the first cryptographic key and adding the authentication code to the bundle.

However, Cane discloses generating an authentication code for the bundle using the first cryptographic key and adding the authentication code to the bundle (Col. 3, lines 55-67 and Col. 4, lines 1-37).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of applicant's invention to modify Bailey's method and system for creating and storing a back up copy of file data stored on a computer by including the capability to generating an authentication code (i.e., CRC) for the bundle (i.e., message) using the

Art Unit: 2131

first cryptographic key and adding the authentication code to the bundle as disclosed by Cane. This modification would have been obvious because one of ordinary skill in the art would have been motivated by the suggestion of Cane to make it difficult to determine the original data without the proper key and ensure privacy and integrity of data upon retrieval (Cane, Col. 2, lines 10-35 and Abstract).

Regarding claims 5 and 13, Bailey discloses a method of restoring one or more files on remote servers to a local device over a network comprising:

deriving a first cryptographic key and a second cryptographic key from a user-provided passphrase (Col. 17-18, lines 1-67 and Col. 19, lines 1-5);

decompressing one or more files from the bundle, and decrypting a bundle received from the remote server using the second cryptographic key (Col. 5, lines 7-33).

Bailey does not expressly disclose checking an authentication code in the bundle using the first cryptographic key.

However, Cane discloses checking an authentication code in the bundle using the first cryptographic key (Col. 3, lines 55-67 and Col. 4, lines 1-37).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of applicant's invention to modify Bailey's method and system for creating and storing a back up copy of file data stored on a computer by including the capability to checking an authentication code in the bundle using the first cryptographic key as disclosed by Cane. This modification would have been obvious because one of

Art Unit: 2131

ordinary skill in the art would have been motivated by the suggestion of Cane to ensure privacy and integrity of data upon retrieval (Cane, Abstract).

Regarding claims 2, 6, 10, and 14, Bailey does not expressly disclose wherein the bundle is encrypted using a strong block cipher.

However, Cane discloses wherein the bundle is encrypted using a strong block cipher (Col. 3, lines 55-67 and Col. 4, lines 1-37).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of applicant's invention to modify Bailey's method and system for creating and storing a back up copy of file data stored on a computer by including wherein the bundle is encrypted using a strong block cipher as disclosed by Cane. This modification would have been obvious because one of ordinary skill in the art would have been motivated by the suggestion of Cane to ensure privacy and integrity of data upon retrieval (Cane, Abstract).

Regarding claims 4, 8, 12, and 16, Bailey does not expressly disclose wherein the cryptographic keys contain at least 128 bits.

However, Cane discloses wherein the cryptographic keys contain at least 128 bits (Col. 3, lines 55-67 and Col. 4, lines 1-37)(Note that MD2, MD4, and MD5 are message-digest algorithms. They are meant for digital signature applications where a large message has to be "compressed" in a secure manner before being signed with

Art Unit: 2131

the private key. All three algorithms take a message of arbitrary length and produce a 128-bit message digest).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of applicant's invention to modify Bailey's method and system for creating and storing a back up copy of file data stored on a computer by including wherein the cryptographic keys contain at least 128 bits as disclosed by Cane. This modification would have been obvious because one of ordinary skill in the art would have been motivated by the suggestion of Cane to ensure privacy and integrity of data upon retrieval (Cane, Abstract).

Claims 3, 7, 11, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bailey, III, (U.S. Patent No. 5,659,614 and Bailey hereinafter) and Cane et al., (U.S. Patent No. 5,940,507 and Cane hereinafter), in view of Walmsley, (U.S. Publication No. 2004/0049468 and Walmsley hereinafter).

Regarding claims 3, 7, 11, and 15, Bailey or Cane does not expressly disclose wherein the authentication code is an HMAC.

However, Walmsley discloses wherein the authentication code is an HMAC (Pages 7-8, Par. 0157-0176).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of applicant's invention to modify the combined method and system of Bailey and Cane by including wherein the authentication code is an HMAC. This modification

would have been obvious because one of ordinary skill in the art would have been motivated by the suggestion of Walmsley to provide for a solution for Internet message authentication security protocols (Walmsley, Page 7, Par. 0158).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arezoo Sherkat whose telephone number is (571) 272-3796. The examiner can normally be reached on 8:00-4:30 Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
